

Backend Software Engineer  
Vantara Systems - Bengaluru, India (Hybrid)

#### ABOUT THE ROLE

We are looking for a Backend Software Engineer to help build and scale the services powering our payments platform. You will design APIs, own services in production, and work closely with product and data teams.

#### REQUIRED SKILLS

- Strong proficiency in Python
- Experience building REST APIs (Django or FastAPI)
- Solid understanding of relational databases (PostgreSQL preferred)
- Experience with containerization (Docker)
- Familiarity with CI/CD pipelines
- Experience writing automated tests

#### PREFERRED SKILLS

- Experience with Kubernetes
- Experience with event-driven architectures (Kafka or similar)
- Exposure to AWS or another major cloud provider
- Experience with GraphQL

#### REQUIREMENTS

- 3+ years of professional backend development experience
- Bachelor's degree in Computer Science or equivalent experience
- Experience mentoring junior engineers is a plus
- Comfortable working in a fast-paced, ambiguous environment

#### WHAT YOU'LL DO

- Design, build, and maintain backend services and REST APIs
- Improve system reliability and performance at scale
- Participate in code reviews and technical design discussions
- Collaborate with cross-functional teams to ship features end-to-end
